EDUCATION

University of California, Santa Barbara

B.S. Statistics and Data Science

Goleta, CA

Sep 2022 – June 2026

EXPERIENCE

GitRoll

AI/ML Engineer Intern

Sep 2024 – May 2025

- Built and shipped a retrieval-augmented LLM pipeline over 200+ GitHub repositories during development, resulting developer metrics are now used by 1.4M+ users in production.
- Developed and integrated an NLP-based classification system (92% precision) into production scoring, directly influencing core product behavior.
- Partnered with engineering and product stakeholders to iterate on evaluation frameworks, improving reliability and alignment with product requirements.

ABVC BioPharma

Clinical Data Scientist Intern

Aug 2025 – Nov 2025

- Built ML pipelines for multimodal clinical trial data analysis to support Phase II and Phase III study design.
- Developed predictive models (83% AUC-ROC) to identify treatment response patterns and patient dropout risk, surfacing actionable insights for clinical decision-making.
- Delivered subgroup behavior analysis to inform trial design recommendations across patient cohorts.

UC Riverside

Machine Learning Research Assistant

June 2025 – Present

- Researched LLM-based graph reasoning systems for edge deletion tasks, running 12+ experiments across diverse datasets and traversal strategies.
- Scaled evaluation pipelines across 100K+ protein structures and topological graphs, achieving 3–5x inference speedup per graph via CUDA batching, quantization, and memory optimization.
- Reduced GPU memory usage by 20%, enabling large-scale evaluation of reasoning performance across benchmark datasets.

Bouken Capital

Venture Scout

Sep 2025 – Present

- Evaluated startups through technical diligence, market analysis, and founder interviews.
- Synthesized findings into structured recommendations, bridging technical insights with business decision-making.

PROJECTS

Biotech Intelligence Engine | Python, LangChain, Celery, TypeScript, FastAPI, Docker

- Biotech catalyst traders lack a unified tool to monitor SEC filings, clinical trial updates, and scientific literature in real time, built an AI-powered aggregation platform to address this gap.
- Designed asynchronous backend services (FastAPI, Celery) for ingestion and structured analysis of multi-source scientific and financial data.
- Developed a retrieval-based system to analyze drug mechanisms and trial outcomes, enabling structured exploration of complex biological and regulatory workflows.

Project Nexus - 1st Place, UCSB Datathon 2026 | Python, LangChain, Pinecone, Neo4j, React

- Built a system transforming 500K+ emails into a structured knowledge graph using LLM-based extraction and filtering.
- Designed graph-based reasoning workflows to surface hidden communities and interaction patterns, enabling investigators, journalists, and analysts to trace connections at scale.
- Implemented a RAG-powered interface used by judges and users to query data and generate evidence-backed insights.

TECHNICAL SKILLS

Languages: Python, SQL, R, TypeScript

ML/AI: PyTorch, scikit-learn, XGBoost, LangChain, Hugging Face

Data: Pandas, NumPy, SQL, MongoDB

Systems: Docker, FastAPI, AWS, Vercel
